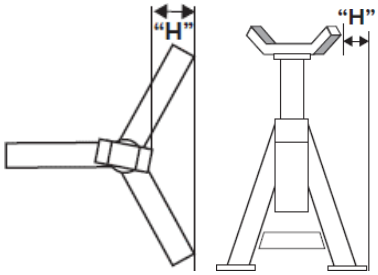

Fig. 5 | 如图 5

5. Maximum height - from base to engagement head at highest point (mm) 从基面到顶头最高点高度V

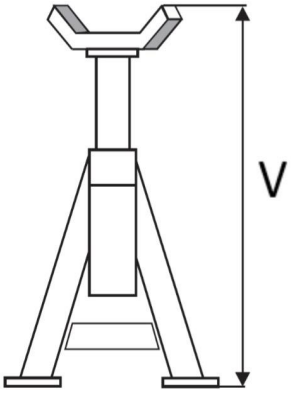

Fig. 6 | 如图 6

6. Height after 100% load test

1. Gradually apply a force to the centre of the engagement head.

2. Continue to increase the force slowly until the axle stand is loaded to 100 %.

3. Maintain the load for 5 minutes.

4. Measure and record the height from the centre of the engagement head to the base plane with the load released

Test 2 - repeat steps 1 to 4 (if height is the same as test 1 no need to do test 3 as the feet have settled)

Test 3 - repeat steps 1-4 (height should be the same as test 2, if not there is an issue)

The reason Sealey request this test to be run up to 3 times is the height can drop as the feet settle.

By a maximum of the three tests the feet should be settled to their final position.

6.100%载荷高度测试

1). 缓慢将压力加到顶头中心

2). 继续加压到额载

3). 保持5分钟

4). 卸荷，测量并记录顶头中心到地面基准高度

测试 2 - 重复1-4，如果高度和测试1结果相同，则无需进行测试 3

测试 3 - 重复1-4，高度测量结果应该和测试2结果一致，如果不一致则有问题了。

7. True area of 1 foot in cm2
Measure the nominal dimensions and calculate the area of one foot, in sq cm.

7. 单只脚板的真实面积CM2 - 测量并计算单只脚板的真实面积，平方厘米
