

DIRECT DRIVE AIR COMPRESSOR 2HP 110V

MODEL NO: **SAC2420A110V SAC5020A110V**

Thank you for purchasing a Sealey product. Manufactured to a high standard, this product will, if used according to these instructions, and properly maintained, give you years of trouble free performance.

IMPORTANT: PLEASE READ THESE INSTRUCTIONS CAREFULLY. NOTE THE SAFE OPERATIONAL REQUIREMENTS, WARNINGS & CAUTIONS. USE THE PRODUCT CORRECTLY AND WITH CARE FOR THE PURPOSE FOR WHICH IT IS INTENDED. FAILURE TO DO SO MAY CAUSE DAMAGE AND/OR PERSONAL INJURY AND WILL INVALIDATE THE WARRANTY. KEEP THESE INSTRUCTIONS SAFE FOR FUTURE USE.

Refer to instructions

Wear eye protection

Wear ear protection

Ensure oil level is correct before first use

WARNING: High Voltage

WARNING: Hot surface

WARNING: Automatic start up

Indoor use only

DO NOT open the air cock before an air hose is attached

Work in progress

1. SAFETY

ELECTRICAL SAFETY

- ☐ **WARNING!** It is the user's responsibility to check the following:
 - ✓ Check all electrical equipment and appliances to ensure that they are safe before using.
 - ✓ Inspect power supply leads, plugs and all electrical connections for wear and damage.
 - ✓ Ensure that the insulation on all cables and on the appliance is safe before connecting it to the power supply.
 - ✗ **DO NOT** use worn or damaged cables, plugs or connectors.
 - ✓ Ensure that any faulty item is repaired or replaced immediately by a Sealey qualified technician.
 - ✓ If the cable or plug is damaged during use, switch off the electricity supply and remove from use.
 - ✓ Sealey recommend that an RCD (Residual Current Device) is used with all electrical products.
- Important:** Ensure that the voltage rating on the appliance suits the power supply to be used and that the plug is fitted with the correct fuse.
- ✗ **DO NOT** pull or carry the appliance by the power cable.
- ✗ **DO NOT** pull the plug from the socket by the cable.
- 1.0.1. Over-current Protection:** The user has to make provision for the installation of the over-current protection of the power circuit in accordance with EN 60204-1:2006.
- NOTE:** If using a transformer to supply the compressor, it must be rated at a minimum of 2kVA to allow the compressor to run efficiently.
- 1.1. GENERAL SAFETY**
 - ✓ Before you connect the equipment to the mains supply make sure that the data on the rating plate are identical to the mains data.
 - ✓ Familiarise yourself with the application and limitations of the compressor.
 - ✓ Ensure the compressor is in good order and condition before use. If in any doubt **DO NOT** use the unit and contact your Sealey Stockist.
 - ✓ Operation must be with all guards, covers, lids and enclosures correctly in place.
 - ✓ Fully assemble the compressor before using for the first time.
 - ✓ The concentration of processed gases that can displace breathing air shall be kept within acceptable levels. Reference EN 12021 for acceptable levels of contaminants in breathing air.
 - ✓ Remove from mains supply when performing maintenance or inspections.
 - ☐ **WARNING!** Item must be serviced by an authorised agent. **DO NOT** tamper with or attempt to adjust pressure switch or safety valve.
 - ✗ **DO NOT** carry out any welding operations on any pressurised part of the vessel.
 - ✓ Before moving, or maintaining the compressor ensure it is unplugged from the mains supply and that the air tank pressure has been vented.
 - ✓ Maintain the compressor in good condition and replace any damaged or worn parts. Use genuine parts only. Unauthorised parts may be dangerous and will invalidate your warranty.
 - ✓ Delivery hoses should be fitted with a safety cord.
 - ✓ It is essential to use separators, water traps and drains which process the liquids produced by the compressor system is put into operation.
 - ✓ The compressor may only be used in suitable rooms (with good ventilation and an ambient temperature from +5°C to +40°C). Ensure there is no dust, acids, vapours, explosive gases, or inflammable gases in the room. The air intake should be from a clean, outside air source.
 - ✓ Read the instructions relating to any accessory to be used with this compressor. Ensure the safe working pressure of any air appliance used exceeds compressors output pressure.
 - ✓ Ensure the safe working pressure of any air appliance used exceeds compressors output pressure. If using a spray gun, check that the area selected for spraying is provided with an air change system/ventilation.
 - ✓ Ensure the air supply valve is turned off before disconnecting the air supply hose to move a transportable compressor use the handle only. Lift the compressor so that the front leg gives enough clearance for manoeuvring but maintain unit's centre of gravity in front of the wheels. **DO NOT** attempt to lift or move the compressor by any other means.
 - ✓ Use the compressor in a well ventilated area and ensure it is placed on a firm surface.
 - ✓ When operating on hard surfaces, improve noise and vibration control by placing 10–20 mm thick rubber mats under the compressor frame.
 - ✓ Keep tools and other items away from the compressor when it is in use, and keep area clean and clear of unnecessary items.
 - ✓ Ensure the air hose is not tangled, twisted or pinched.
 - ✓ Keep children and unauthorised persons away from the working area.
 - ✓ Only move the compressor by the handle (if portable).
 - ✗ **DO NOT** dis-assemble compressor for any reason. The unit must be checked by qualified personnel only.

- ✗ **DO NOT** use the compressor outdoors, or in damp, or wet, locations.
- ✗ **DO NOT** operate within the vicinity of flammable liquids, gases or solids.
- ✗ **DO NOT** touch compressor cylinder, cylinder head or pipe from head to tank as these may be hot.
- ✗ **DO NOT** use this product to perform a task for which it has not been designed.
- ✗ **DO NOT** deface the certification plate attached to the compressor tank.
- ✗ **DO NOT** cover the compressor or restrict air flow around the unit whilst operating.
- ▲ **DANGER! DO NOT** direct the output jet of air towards people or animals.
- ✗ **DO NOT** operate the compressor without an air filter.
- ✗ **DO NOT** allow anyone to operate the compressor unless they have received full instructions.
- ☐ **WARNING!** The air tank is a pressure vessel and the following safety measures apply:
- ✗ **DO NOT** tamper with the safety valve, **DO NOT** modify or alter the tank in any way and **DO NOT** strap anything to the tank.
- ✗ **DO NOT** subject the tank to impact, vibration or to heat and **DO NOT** allow contact with abrasives or corrosives.
- ✓ Drain condensation from tank daily and inspect inside walls for corrosion every three months and have a detailed tank inspection carried out annually. The tank shell must not fall below the certified thickness at any point.
- ☐ **WARNING!** If an electrical fuse blows, ensure it is replaced with an identical fuse type and rating.
- ✓ When not in use, store the compressor carefully in a safe, dry, childproof location.
- ✓ When the compressor is not in use, it should be switched off, disconnected from the mains supply and the air drained from the tank.
- ✓ **Under the PRESSURE SYSTEMS SAFETY REGULATIONS 2000 it is the responsibility of the owner of the compressor to initiate a system of inspection that both defines the frequency of the inspection and appoints a person who has specific responsibility for carrying out the inspection.**

2. INTRODUCTION

Aluminium cylinder head with cast iron cylinder gives added resistance to wear. Pump head directly coupled to heavy-duty induction motor for reliable and quiet operation. Precision welded receiver tank manufactured to meet Pressure Vessel Directive. Suitable for general-purpose workshop applications. Fitted with fully automatic pressure cut-out switch and twin gauges displaying tank and working pressures.

3. SPECIFICATION

Model No:	SAC2420A110V	SAC5020A110V
Air Displacement cfm(L/min):	6.35cfm(180L/min)	6.35cfm(180L/min)
Maximum Free Air Delivery cfm(L/min):	3.37cfm(95L/min)	3.37cfm(95L/min)
Maximum Pressure:	116psi(8bar)	116psi(8bar)
Minimum Rated Supply:	16A	16A
Motor Output:	2hp	2hp
Nett Weight:	23Kg	29Kg
Noise Level:	95dB(A)	95dB(A)
Noise Test Code:	EN ISO 3744 : 1995	
Oil Capacity:	240ml	240ml
Outlet:	Quick Release Coupling	Quick Release Coupling
Phase:	1ph	1ph
Plug Type:	Yellow - 16A-2P+E	Yellow - 32A-2P+E
Power Supply Cable length:	1.8m	1.8m
Receiver Capacity:	24L	50L
Recommended Oil:	DAB-100#	DAB-100#
Size (W x D x H):	550mm x 240mm x 550mm	705mm x 300mm x 600mm
Supply:	110V/16A	110V/16A

Additional Specification:

Short circuit current rating for each incoming power supply:
 28A for SAC2420A110V 18A for SAC5020A110V
 Full load current for each incoming supply:10A.
 Intended media: Air.
 Inlet discharge pressure and temperatures: Pressure 0.8MPa
 Temperature 70°C.
 Maximum pressure ratio: 0.8MPa.
 Pressure limits of the lubrication system: 0.1MPa.
 Temperature limits of the lubrication system:100°C.
 Maximum speed of the unit: 2800RPM.
 Minimum speed of the unit: 2630RPM.
 Tank Thickness: 2.5mm
 Air Filter: SAC5020A-V2-P03

4. ASSEMBLY

- 4.1. Remove compressor from packaging and inspect for any shortages or damage. If anything is found to be missing or damaged, contact your supplier.
- 4.2. Confirm that the mains voltage corresponds with the voltage shown on the compressor data plate.
- 4.3. The compressor should be installed on a flat surface, or one that does not exceed 10° either transversely or longitudinally, (see fig.2) as this may cause oil starvation and should be in a position that allows good air circulation around the unit.
- 4.4. **THE COMPRESSOR IS SUPPLIED WITHOUT OIL IN IT.** The oil is in a separate container. Remove the transit plug from the oil filler aperture, pour oil into the aperture until it has reached the correct level on the sight (fig.3). Fit the oil filler/breather supplied into the aperture.
- 4.5. Ensure that the air vent in the oil filler/breather is free from debris. If the air vent is blocked, pressure can build up in the crankcase causing damage to the compressor and possible personal injury.

- 4.6. If it is not already fitted, screw the air filter holder into the inlet port (fig.4).

IMPORTANT Take care when selecting tools for use with the compressor. Air tool manufacturers normally express the volume of air required to operate a tool in cubic feet per minute (cfm). This refers to free air delivered by the compressor ('air out') which varies according to the pressure setting. **DO NOT** confuse this with the compressor displacement which is the air taken in by the compressor ('air in'). 'Air out' is always less than 'air in' - due to losses within the compressor - and so it is important that, before choosing equipment, you study the 'Free Air Delivery' figures shown in the Specification Chart.

5. OPERATION

- ❑ **WARNING! ENSURE THAT YOU HAVE READ, UNDERSTOOD AND APPLIED SECTION 1 SAFETY INSTRUCTIONS.**

- 5.1. Make sure that the main switch (fig.5.1) is 'OFF' (down).
- 5.2. Check the oil level by looking through the sight glass (fig.3).
- 5.3. Ensure that the tank drain valve is closed (fig.1).
- 5.4. Connect the air tool required to the compressor via an air line connected to the air outlet.
- 5.5. Plug the mains plug into the mains supply and start the compressor by pulling up the main switch (fig.5.1).
- 5.6. Allow the pressure in the tank to rise to the maximum at which point the compressor will automatically cut out. Tank pressure is shown on the larger gauge (fig.5.6).
- 5.7. Begin to gradually open the regulator by turning the knob (fig.5.2) until the small gauge registers the required operating pressure specified for the tool to be used. Always **adjust up** to the required pressure rather than down from a higher pressure. The required setting, once achieved, can be locked by screwing the locking ring (fig.5.3) up tight underneath the adjusting knob.
- 5.8. You can now begin to use the tool. The compressor will operate automatically cutting in and out as required to restore the air pressure in the tank. The pressure switch (fig.7) stops the motor when the maximum tank pressure is reached and restarts it when pressure falls below the minimum threshold - approx. 2 bar (29psi) less than the maximum pressure.
- 5.8.1. If the motor does not cut in and out, but runs continuously when using an air appliance, the capacity of the compressor may be too small for the appliance.
- 5.8.2. The main gauge (fig.5.6) indicates the pressure inside the main tank, **NOT** the pressure supplied to the air equipment, which is shown on the smaller gauge (fig.5.5). Should the pressure in the main tank exceed the pre-set maximum, the safety valve (fig.5b.7) will activate. After 1,000 hours of operation, clean the safety valve and perform a thorough cleaning of the compressor.

- ❑ **WARNING! For this reason DO NOT tamper with, or adjust, the switch or the safety valve.**

- 5.9. When the compressor is not being used set the regulated pressure to zero so as to avoid damaging the pressure regulator.
- 5.10. To stop the compressor press down the main switch (fig.5.1). When the compressor stops there will be a whistling sound as compressed air is vented from the compressor head. **DO NOT**, other than in an emergency, stop the compressor by switching off the mains power, or by pulling the plug out, as the pressure relief will not then occur and motor damage may result upon restart.
- 5.11. When you have finished using the compressor unplug the unit from the mains power supply.
- 5.12. Set the outlet pressure on the regulator to zero.
- 5.13. Remove the air line and air tool.
- 5.14. The tank must now be drained. Release the air left in the tank by opening air tap (fig.5b.8). After drain away condensation (see 5.14.1) that may have formed within the tank. Choose a suitable location for this operation and/or make provision to collect the condensation.

IMPORTANT: Wear ear and eye protection.

- 5.14.1. Open the tank drain valve (fig.1) slowly, allowing moisture to bleed from the tank. After bleeding, close the drain valve to prevent debris building up in the valve.

- ❑ **WARNING! Water that is allowed to remain in the tank during storage will corrode and weaken the air tank, which could cause the tank rupture. To avoid serious injury, drain the tank on a daily basis.**

5.15. SAFETY FEATURES

- 5.15.1. **THERMAL CUT OUT:** If the unit overheats the thermal cut out will operate and shut the unit down. Allow the unit to cool down then press the reset button, located just inside the pump cover (fig.6).

6. MAINTENANCE

- ❑ **WARNING!** Before performing any maintenance operation, switch off the compressor, disconnect from electricity supply and release all air from the tank. In order to keep the compressor in good working condition, periodical maintenance is essential.

6.1. After the first 50 working hours replace the lubricating oil - see Item 6.4.1. for replacing the lubricating oil.

6.2. OPERATIONS TO BE CARRIED OUT DAILY:

6.2.1. Drain condensation, place a container under the valve and open the valve by turning anti-clockwise (fig.1). Re-tighten the valve.

6.2.2. Check that all nuts and bolts are tight, particularly those retaining the crankcase and cylinder head.

6.3. OPERATIONS TO BE CARRIED OUT EVERY 100 HOURS: (or more frequently, if the compressor operates in a very dusty atmosphere).

6.3.1. Check oil level and, if necessary, top it up.

6.3.2. Remove the air filter element by unscrewing the filter holder (fig.4) and prising open the holder. Clean it by blowing air through with an air line at low pressure, from the clean side. Alternatively, wash it in soapy water, rinse and dry. **DO NOT** operate the compressor without the filter as foreign bodies or dust could seriously damage the pump.

6.3.3. Check for oil leaks.

6.4. OPERATIONS TO BE CARRIED OUT EVERY 200 HOURS:

6.4.1. Replace the lubricating oil. Remove the oil filler/breather (fig.3A) and unscrew the drain bolt (fig.3B), drain the oil into a suitable container. Drain when the compressor is hot so that the oil drains rapidly and completely. Incline the compressor to ensure complete drainage. Replace the drain bolt and refill with fresh oil through the filler aperture. **DO NOT** overfill.

6.4.2. Replace oil filler/breather (fig.3A).

6.5. RECOMMENDED OIL:

6.5.1. Suitable for room temperatures ranging from +5°C to +25°C: SEALEY CPO or equivalent use SAE 40 compressor oil. Alternately for room temperatures below +5°C: use SAE 20 compressor oil.

- ❑ **WARNING!** Never mix different oils and **DO NOT** use non-detergent/low quality oils as the compressor may be damaged.

- ❑ **WARNING!** Always use recommended oil for compressor ensuring the correct viscosity is achieved during cold start up and to eliminate clogged oil filters, or valve malfunction. See maintenance table below for recommended oil changes.

6.5.2. Dispose of waste oil only in accordance with local authority requirements.

6.5.3. Check the automatic cut-out at maximum pressure and the automatic cut-in at 2 bar below that.

6.6. OPERATIONS TO BE CARRIED OUT EVERY 500 HOURS:

6.6.1. Replace air filter.

6.6.2. Check all tube fittings and electrical connections.

IMPORTANT! Failure to carry out maintenance tasks may invalidate the warranty on your compressor.

- ❑ **WARNING!** Air contaminants taken into the compressor will affect optimum performance. Example: Body filler dust or paint over spray will clog the pump intake filter and may cause internal damage to pump/motor components. **NOTE:** Any parts damaged by any type of contamination will not be covered by warranty.

6.7. INSPECTION OF PRESSURE TANK BOTH INSIDE AND OUT

6.7.1. Under the PRESSURE SYSTEMS SAFETY REGULATIONS 2000 it is the responsibility of the owner of the compressor to initiate a system of inspection that both defines the frequency of the inspection and appoints a person who has specific responsibility for carrying out the inspection.

- ❑ **WARNING!** Display warning signs against reconnection whilst the compressor is being repaired such as:

× **DO NOT START MAINTENANCE WORK IN PROGRESS.**

6.8. SCHEDULED MAINTENANCE TABLE

Maintenance	Daily	100 hours	200 hours	500 hours
Drain condensation	•			
Check Oil level		•		
Clean Intake filter		•		
Check for Oil leaks		•		
Check Cut-out (pressure relief valve (fig.5b 7).			•	
Replace Oil			•	
Replace air filter				•
Check tube fittings and electrical connections				•

7. TROUBLESHOOTING

FAULT	CAUSE	REMEDY
Pressure drop in the tank.	<ol style="list-style-type: none"> 1. Air leaks at connections. 2. Air leaks from cylinder head gasket. 	<ol style="list-style-type: none"> 1. Run compressor to maximum pressure, switch off. Brush soap solution over connections and look for bubbles. Tighten connections showing leaks. If problem persists, contact Authorised Service Agent. 2. Check tightness of head bolts, if leak continues contact Authorised Service Agent.
Pressure switch valve leaks when compressor is idle.	Non-return valve seal defective.	Empty the air tank. Referring to (fig.7), remove the non-return valve cap (fig.7.3), spring (fig.7.2) and seal (fig.7.1). Clean the seal and its seat, or if necessary replace the seal and refit.
Air leaks from tank body or tank welds.	Internal corrosion caused by infrequent tank draining or non permitted modifications to tank.	Tank could rupture or explode. Cannot be repaired. DISCONTINUE USE IMMEDIATELY.
Motor stops and will not restart.	<ol style="list-style-type: none"> 1. Thermal cut out has operated. 2. Supply fuse has tripped. 	<ol style="list-style-type: none"> 1. Allow unit to cool for 30 minutes then press reset button (fig.6). 2. Reset fuse and restart unit. If repeated tripping occurs, replace the check valve or contact Authorised Service Agent.
Compressor stops and will not restart.	Motor failure.	Contact Authorised Service Agent.
Compressor does not stop at maximum pressure.	<ol style="list-style-type: none"> 1. Pressure switch fault. 2. Filter clogged. 3. Head gasket or valve fault. 	<ol style="list-style-type: none"> 1. Contact Authorised Service Agent. 2. Replace filter element. 3. Contact Authorised Service Agent.
Compressor noisy with metallic knock.	Bearing or piston damage.	Contact Authorised Service Agent.
Excessive moisture in discharged air.	High humidity environment.	Drain tank after each use.
The compressor does not start.	<ol style="list-style-type: none"> 1. No supply voltage. 2. Insufficient supply voltage. 3. Outside temperature is too low. 4. Motor is overloaded. 	<ol style="list-style-type: none"> 1. Check the supply voltage, the power plug and the socket-outlet. 2. Make sure that the extension cables are not too long. 3. Never operate with an outside temperature of below +5°C. 4. Allow the motor to cool down. If necessary, remedy the cause of the over heating.
The compressor starts but there is no pressure.	<ol style="list-style-type: none"> 1. The non-return valve leaks. 2. The seals are damaged. 3. The drain plug for condensation water leaks. 	<ol style="list-style-type: none"> 1. Have a Authorised Service Agent replace the non return valve. 2. Check the seals and have any damaged seals replaced by Authorised Service Agent. 3. Tighten the screw by hand. Check the seal on the screw and replace if necessary.
The compressor starts, pressure is shown on the pressure gauge, but the tools do not start.	<ol style="list-style-type: none"> 1. The hose connection has a leak. 2. The quick-lock coupling has a leak. 3. Insufficient pressure set on the pressure regulator. 	<ol style="list-style-type: none"> 1. Check the compressed air hose and replace if necessary. 2. Check the quick-lock coupling and replace if necessary. 3. Increase the set pressure with the pressure regulator.

8. AIR SUPPLY

8.1. RECOMMENDED HOOK-UP FIG.8.

8.1.1. Ensure tool's air valve (or trigger) is in the off position before connecting to the air supply.

☐ **WARNING!** Ensure the air supply is clean and does not exceed specification (above) while operating the tool. Too high an air pressure and/or unclean air will shorten the product life due to excessive wear, and may be dangerous causing damage and/or personal injury.

8.1.2. Drain the air tank daily. Water in the air line will ruin the paint finish and damage the tool.

8.1.3. Clean air inlet filter weekly.

8.1.4. Line pressure should be increased to compensate for unusually long air hoses (over 8 metres). The minimum hose diameter should be 1/4" I.D. And fittings must have the same inside dimensions.

8.1.5. Keep hose away from heat, oil and sharp edges. Check hose for wear, and make certain that all connections are secure.

8.2. COUPLINGS

Vibration may cause failure if a quick change coupling is connected directly to the tool. To overcome this, connect a leader hose. A quick change coupling may then be used to connect the leader hose to the air line recoil hose (fig.8).

9. END OF LIFE

9.1. When the product is no longer in service, it should be safely dismantled. Components must be carefully removed and sorted for recycling, reuse, or disposal in accordance with safety and environmental regulations, ensuring that all parts are handled responsibly and any hazardous materials are managed appropriately.

ENVIRONMENT PROTECTION

Recycle unwanted materials instead of disposing of them as waste. All tools, accessories and packaging should be sorted, taken to a recycling centre and disposed of in a manner which is compatible with the environment. When the product becomes completely unserviceable and requires disposal, drain any fluids (if applicable) into approved containers and dispose of the product and fluids according to local regulations.

REGISTER YOUR
PURCHASE HERE

WEEE REGULATIONS

Dispose of this product at the end of its working life in compliance with the EU Directive on Waste Electrical and Electronic Equipment (WEEE). When the product is no longer required, it must be disposed of in an environmentally protective way. Contact your local solid waste authority for recycling information.

Note: It is our policy to continually improve products and as such we reserve the right to alter data, specifications and component parts without prior notice.

Important: No Liability is accepted for incorrect use of this product.

Warranty: Guarantee is 12 months from purchase date, proof of which is required for any claim.
