

PRT

trend®
routing technology

Please read these instructions before use.

Dear Customer

Thank you for purchasing this Trend product, we hope you enjoy many years of creative and productive use.

Please remember to return your guarantee card within 28 days of purchase.

Please read these instructions before use.

TECHNICAL DATA

Voltage:	UK & Eire	230V
	UK & Eire	115V
	Europe	230V
On/off switch		No-volt release
Dimensions (width x depth)		650mm x 550mm
Height with legs		830mm
Bench height		350mm
Cutter diameter max.		86mm
Loss of cutting depth due to table thickness		8mm
Maximum workpiece height		57mm
Weight		25kg
Fuse:	UK & Eire	230V 13A in plug
	UK & Eire	115V 16A in mains
	Europe	230V 10A in mains

The following symbols are used throughout this manual:

Denotes risk of personal injury, loss of life or damage to the tool in case of non-observance of the instructions in this manual.

Denotes risk of electric shock.

Refer to the instruction manual of your power tool.

This unit must not be put into service until it has been established that the power tool to be connected to this unit is in compliance with 2006/42/EC (identified by the CE marking on the power tool).

INTENDED USE

The unit is intended for stationary operation of portable routers for the cutting of wood or wood based material when suitable cutter is fitted. It is not intended for continuous production or production line use.

If you require further safety advice, technical information or spare parts, please call Trend Technical Support or visit www.trend-uk.com

SAFETY

WARNING:

Observe the safety regulations in the instruction manual of the power tool to be used. Please read the following instructions carefully. Failure to do so could lead to serious injury. When using electric tools, basic safety precautions, including the following should always be followed to reduce the risk of fire, electric shock and personal injury. Also observe any applicable additional safety rules. Read the following safety instructions before attempting to operate this product.

PLEASE KEEP THESE INSTRUCTIONS IN A SAFE PLACE.

The attention of UK users is drawn to The Provision and Use of Work Equipment Regulations 1998, and any subsequent amendments.

Users should also read the HSE/HSC Safe Use of Woodworking Machinery Approved Code of Practice and Guidance Document and any amendments.

Users must be competent with woodworking equipment before using our products.

IMPORTANT NOTE:

Residual Risk. Although the safety instructions and operating manuals for our tools contain extensive instructions on safe working with power tools, every power tool involves a certain residual risk which cannot be completely excluded by safety mechanisms. Power tools must therefore always be operated with caution!

General

1. Disconnect power tool and attachment from power supply when not in use, before servicing, when making adjustments and when changing accessories such as cutters. Ensure switch is in "off" position. Always ensure cutter has stopped rotating.
2. Always mount the power tool, accessory or attachment in conformity with the instructions. Only use attachment and accessories specified in the power tool manual. The tool or attachment should not be modified or used for any application other than that for which it was designed. Do not force tool.
3. Keep children and visitors away. Do not let children or visitors touch the tool, accessory or attachment. Keep children and visitors away from work area. Make the workshop child proof with padlock and master switch.
4. Dress properly. Do not wear loose clothing or jewellery; they can be caught in moving parts. Rubber gloves and non-skid footwear is

recommended when working outdoors. Wear protective hair covering to contain long hair.

5. Consider working environment. Do not use the product in the rain or in a damp environment. Keep work area well lit. Do not use power tools near gasoline or flammable liquids. Keep workshop at a comfortable temperature so your hands are not cold. Connect machines that are used in the open via a residual current device (RCD) with an actuation current of 30 mA maximum. Use only extension cables that are approved for outdoor use.
6. The accessory or attachment must be kept level and stable at all times.
7. Keep work area clean. Cluttered workshops and benches can cause injuries. Ensure there is sufficient room to work safely.
8. Secure idle tools. When not in use, tools should be stored in a dry and high or locked up place, out of reach of children.
9. For best control and safety use both hands on the power tool and attachment. Keep both hands away from cutting area. Always wait for the spindle and cutter to stop rotating before making any adjustments.
10. Always keep guards in place and in good working order.
11. Remove any nails, staples and other metal parts from the workpiece.
12. Maintain tools and cutters with care. Keep cutters sharp and clean for better and safer performance. Do not use damaged cutters. Follow instructions for lubricating and changing accessories. Keep handles dry, clean and free from oil and grease.
13. Maintain accessories. Do not use damaged accessories. Only use accessories recommended by the manufacturer.
14. Check damaged parts. Before operation inspect the attachment, the power tool, the cable, extension cable and the plug carefully for signs of damage. Check for alignment of moving parts, binding, breakage, mounting and any other conditions that may effect its operation. Have any damage repaired by an Authorised Service Agent before using the tool or accessory. Protect tools from impact and shock.
15. Do not use tool if switch does not turn it on or off. Have defective switches replaced by an Authorised Service Agent
16. Don't over reach. Keep proper footing and balance at all times. Do not use awkward or uncomfortable hand positions.
17. Don't abuse the cable. Never carry power tool or accessory by cord or pull it to disconnect from the socket. Keep cord from heat, oil and sharp edges. Always trail the power cord away from the work area.
18. Connect dust extraction equipment. If devices are provided for the connection of dust extraction and collection facilities, ensure these are connected and properly used.
19. Check all fixing and fastening nuts, bolts and screws on power tool, attachment and cutting tools before use to ensure they are tight and secure. Periodically check when machining over long periods.
20. Stay alert. Watch what you are doing. Use common sense. Do not operate tools when you are tired, under the influence of drugs or alcohol.
21. Personal Protective Equipment (PPE) for eye, ear and respiratory protection must be worn. All PPE must meet current UK and EU legislation.
22. Do not leave tools running unattended. Do not leave tool until it comes to a complete stop.
23. Always clamp workpiece being machined securely.
24. Only use cutting tools for woodworking that meet EN847-1/2 safety standards, and any subsequent amendments.
25. Vibration levels. Hand held power tools produce different vibration levels. You should always refer to the specifications and relevant Health & Safety Guide.

Routing Safety

1. Read and understand instructions supplied with power tool, attachment and cutter.
2. Keep hands, hair and clothing clear of the cutter.
3. Remove adjusting keys and spanners. Check to see that keys and adjusting spanners are removed from the router tool, cutter and attachment before turning router on. Make sure cutter can rotate freely.
4. Noise. Take appropriate measures for the protection of hearing if the sound pressure of 85dB(A) is exceeded. Routing sound pressure may exceed 85dB(A), so ear protection must be worn.
5. Eye protection. Always wear eye protection in the form of safety goggles, spectacles or visors to protect the eyes.

6. Respiratory protection. Wear a face or dust mask, or powered respirator. Dust masks/filters should be changed regularly.
7. Do not switch router on with the cutter touching the workpiece. At the end of the cut, release the router plunge and allow spindle to stop rotating. Never use the spindle lock as a brake.
8. The direction of routing must always be opposite to the cutter's direction of rotation. Do not back-cut or climb-cut.
9. Check before cutting that there are no obstructions in the path of the router. Ensure there are no obstacles beneath workpiece when cutting full thickness, and that a sacrificial work surface is used.

Router Cutter Safety

1. Cutting tools are sharp. Care should be taken when handling them. Do not drop cutters or knock them against hard objects. Handle very small diameter cutters with extra care. Always return cutter to its packaging after use.
2. Always use cutters with a shank diameter corresponding to the size of the collet installed in your tool.
3. The maximum speed (n.max) marked on the tool, or in instructions or on packaging shall not be exceeded. Where stated the speed range shall be adhered to. Recommended speeds are shown in the Trend Routing Catalogue and/or website.
4. Always use router cutters in a router. Drill and boring bits must not be used in a router. Router cutters must only be used for the material cutting application for which they are designed. Do not use on metal or masonry.
5. Never use cutters with a diameter exceeding the maximum diameter indicated in the technical data of the powertool or attachment used.
6. Before each use check that the cutting tool is sharp and free from damage. Do not use the cutting tool if it is dull, broken or cracked or if in any other damage is noticeable or suspected.
7. Cutters should be kept clean. Resin build up should be removed at regular intervals with Resin Cleaner®. The use of a PTFE dry lubricant will reduce resin build up. Do not use PTFE spray on plastic parts.
8. When using stacked tooling (multi-blade, block and groover etc.) on a spindle arbor, ensure that the cutting edges are staggered to each other to reduce the cutting impact.
9. Cutter shanks should be inserted into the collet all the way to the line

- indicated on the shank. This ensures that at least $\frac{3}{4}$ of the shank length is held in the collet. Ensure clamping surfaces are cleaned to remove dirt, grease, oil and water.
10. Observe the correct assembly and fitting instructions in the router instruction manual for fitting the collet, nut and cutter.
11. Tool and tool bodies shall be clamped in such a way that they will not become loose during operation. Care shall be taken when mounting cutting tools to ensure that the clamping is by the shank of the cutting tool and that the cutting edges are not in contact with each other or with the clamping elements.
12. It is advisable to periodically check the collet and collet nut. A damaged, worn or distorted collet and nut can cause vibration and shank damage. Do not over-tighten the collet nut.
13. Do not take deep cuts in one pass; take several shallow or light passes to reduce the side load applied to the cutter and router. Too deep a cut in one pass can stall the router.
14. In case of excessive vibrations whilst using the router stop immediately and have the eccentricity of the router, router cutter and clamping system checked by competent personnel
15. All fastening screws and nuts should be tightened using the appropriate spanner or key and to the torque value provided by the manufacturer.
16. Extension of the spanner or tightening using hammer blows shall not be permitted.
17. Clamping screws shall be tightened according to instructions provided by the manufacture. Where instructions are not provided, clamping screws shall be tightened in sequence from the centre outwards.

Using Routers In A Fixed Position

1. Attention should be made to the HSE's Safe Use of Vertical Spindle Moulding Machines Information Sheet No.18 and any revisions.
2. After work, release the router plunge to protect the cutter.
3. Always use a push-stick or push-block when making any cut less than 300mm in length or when feeding the last 300mm of the cut.
4. The opening around the cutter should be reduced to a minimum using suitably sized insert rings in the table and closing the back fence cheeks or fitting a false fence on the back fence.
5. Whenever possible use a work holding device or jig to secure component being machined. Ensure any attachment is securely fitted to the workbench, with table surface at approximately hip height.

6. Use a No-Volt Release Switch. Ensure it is fixed securely, easily accessible and used correctly.

7. In router table (inverted) mode, stand to the front right of the table. The cutter will rotate anti-clockwise when viewed from top so the feed direction is from the right (against the rotation of the cutter). In overhead mode, stand to the front left of the machine table and the feed direction is from the left.
8. Do not reach underneath table or put your hands or fingers at any time in the cutting path while tool is connected to a power supply.

9. Never thickness timber between the back of the cutter and the backfence.

Useful Advice When Routing

1. Judge your feed rate by the sound of the motor. Feed the router at a constant feed rate. Too slow a feed rate will result in burning.
2. Trial cuts should be made on waste material before starting any project.
3. When using some attachments e.g. a router table or dovetail jig, a fine height adjuster is recommended.
4. When using a template guide bush, ensure there is sufficient clearance between cutter tip and inside edge of bush and that it cannot come into contact with collet and nut. Ensure cutter and guide bush are concentric.

Router Cutter Repair/Maintenance

1. Repair of tools is only allowed in accordance with the manufacturers instructions.
2. The design of composite (tipped) tools shall not be changed in process of repair. Composite tools shall be repaired by a competent person i.e. a person of training and experience, who has knowledge of the design requirements and understands the levels of safety to be achieved.
3. Repair shall therefore include, e.g. the use of spare parts which are in accordance with the specification of the original parts provided by the manufacturer.
4. Tolerances which ensure correct clamping shall be maintained.
5. Care shall be taken that regrinding of the cutting edge will not cause weakening of the body and the connection of the cutting edge to the body.

ELECTRICAL SAFETY

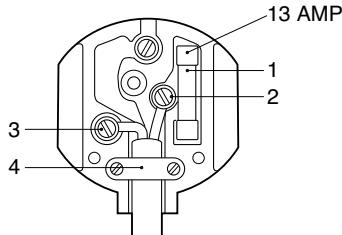

Mains Plug Replacement (UK & Ireland only)

Always check the condition of the cable and plug before starting with your work.

Should your mains plug need replacing and you are competent to do this, proceed as instructed below. If you are in doubt, contact an authorised Trend repair agent or a qualified electrician.

- Disconnect the plug from the supply.
- Cut off the plug and dispose of it safely; a plug with bared copper conductors is dangerous if engaged in a live socket outlet.
- Only fit 13 Amperes BS 1363A approved plugs fitted with a 13 Amp A.S.T.A approved BS 1362 fuse (1).
- The cable wire colours, or a letter, will be marked at the connection points of most good quality plugs. Attach the wires to their respective points in the plug (see below). Brown is for Live (L) (2) and Blue is for Neutral (N) (3).
- Before replacing the top cover of the mains plug ensure that the cable restraint (4) is holding the outer sheath of the cable firmly and that the two leads are correctly fixed at the terminal screws.

For 115V units with a power rating exceeding 1500W, we recommend to use a plug to BS4343 standard.

**Never use a light socket.
Never connect the live (L) or neutral (N) wires to the earth pin marked E or $\frac{1}{3}$.**

Using an Extension Cable

- If an extension cable is required, use an approved triple core extension cable suitable for the power input of this tool (see technical data). The minimum conductor size is 1.5mm².
- When using a cable reel, always unwind the cable completely.
- Also refer to the table below.

Conductor size (mm ²)	Cable rating (Amperes)
0.75	6
1.00	10
1.50	15
2.50	20
4.00	25

		Cable length (m)					
Voltage	Amperes	7.5	15	25	30	45	60
115	0 - 2.0	6	6	6	6	6	10
	2.1 - 3.4	6	6	6	6	15	15
	3.5 - 5.0	6	6	10	15	20	20
	5.1 - 7.0	10	10	15	20	20	25
	7.1 - 12.0	15	15	20	25	25	-
	12.1 - 20.0	20	20	25	-	-	-
230	0 - 2.0	6	6	6	6	6	6
	2.1 - 3.4	6	6	6	6	6	6
	3.5 - 5.0	6	6	6	6	10	15
	5.1 - 7.0	10	10	10	10	15	15
	7.1 - 12.0	15	15	15	15	20	20
	12.1 - 20.0	20	20	20	20	25	-

115v routers over 13.5A including T10ELK & T11ELK cannot be used with the PRT/L (115v).

EC DECLARATION OF CONFORMITY

Trend declare that the attachment mentioned above is in compliance with 2006/42/EC, and has been designed in accordance with EN60745-1 Annex M.

The tool also complies with directive 73/23/EEC (or latest).

Pushstick is made in compliance with Harmonized Standard EN1870-1.

A handwritten signature of Jeff Willcocks.

Managing Director
Jeff Willcocks

Trend Machinery & Cutting Tools Ltd
Unit 6 Odhams Trading Estate
St Albans Road, Watford
Herts, WD24 7TR
United Kingdom

MARKINGS ON TABLE

The following pictures are shown on the tool.

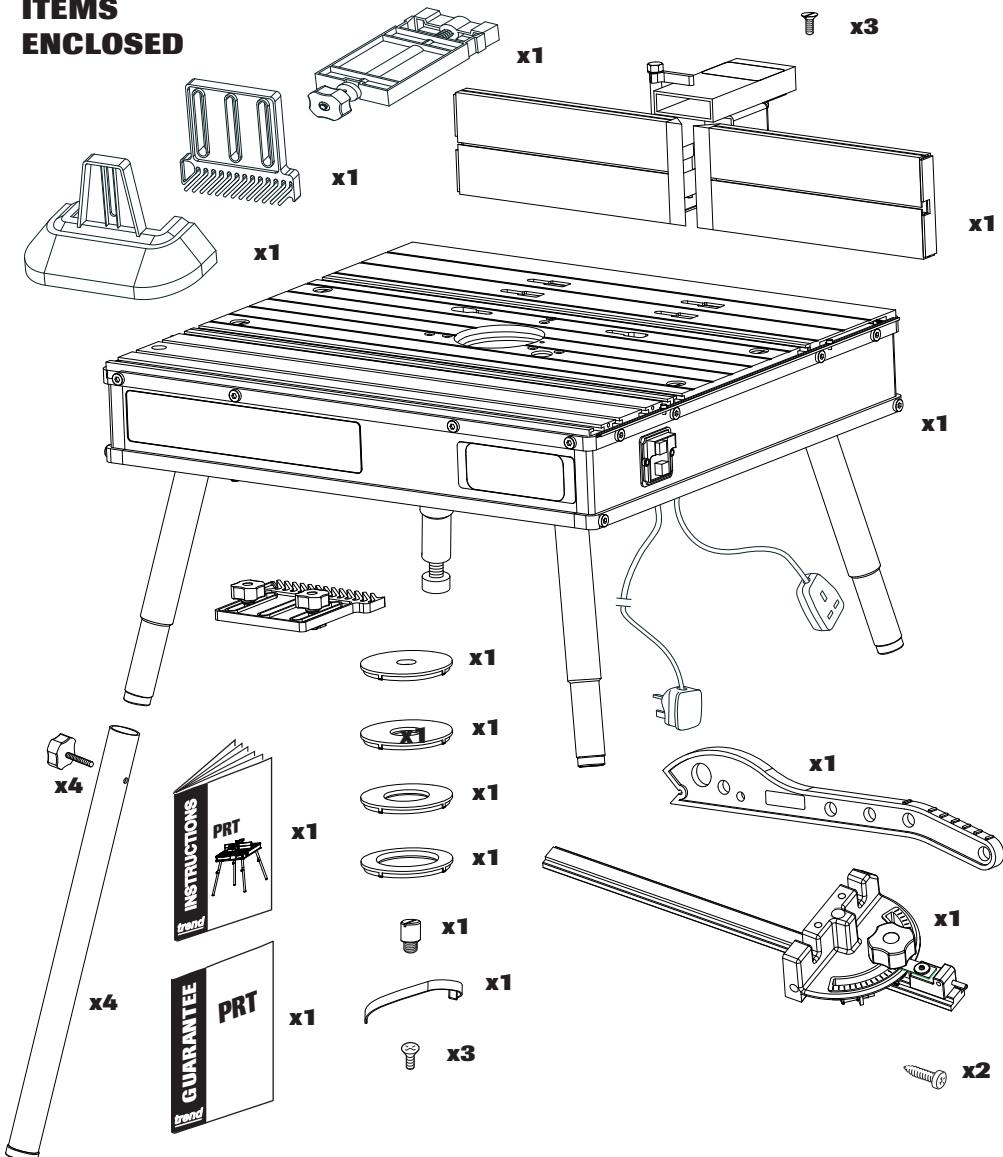

Read instruction manual before use.

Date Code Position

The year of manufacture is on a label next to the rating plate.

**ITEMS
ENCLOSED**

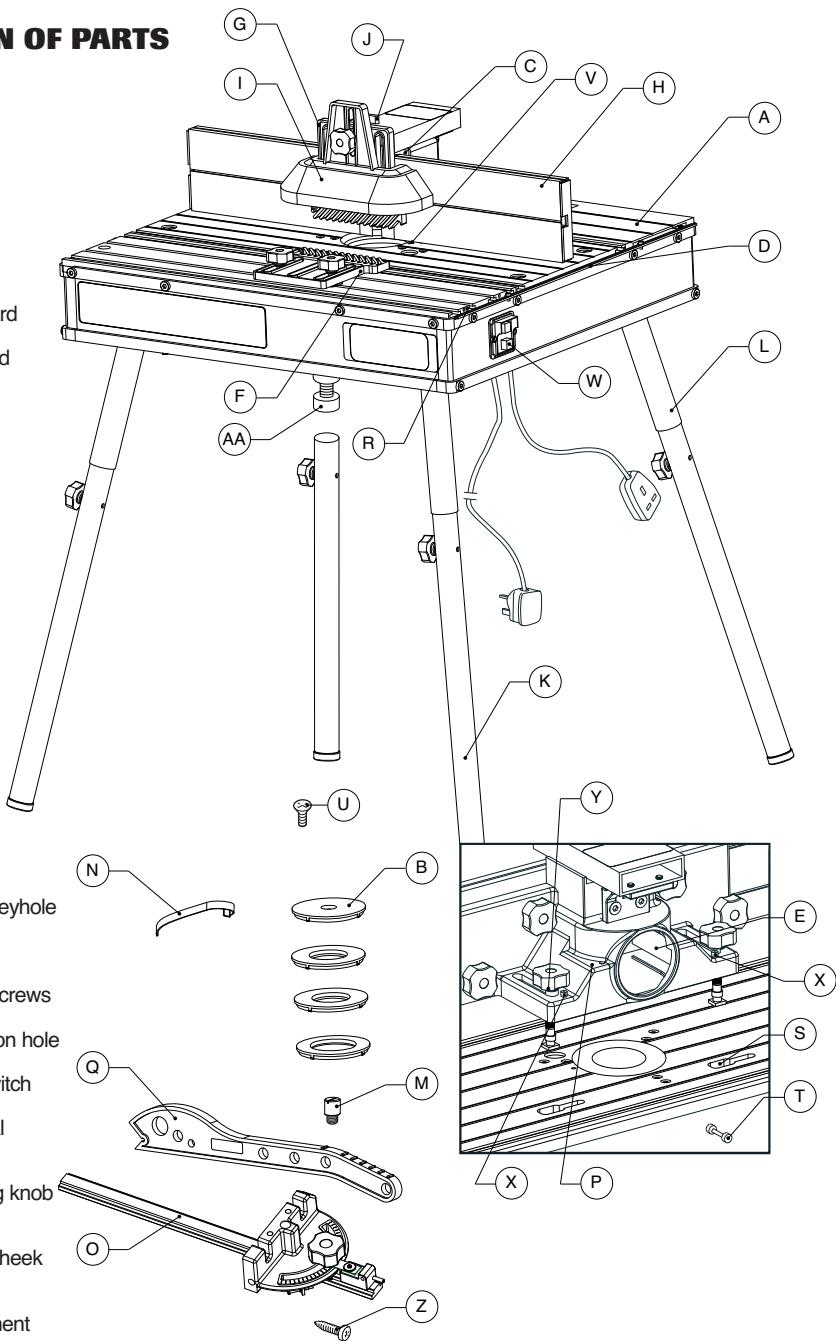

ITEMS REQUIRED

- Pozi[®] No.2. screwdriver.
- Router.
- Hand tools.
- Spanner 8mm A/F for mitre fence.
- Slotted screwdriver for lead on pin.

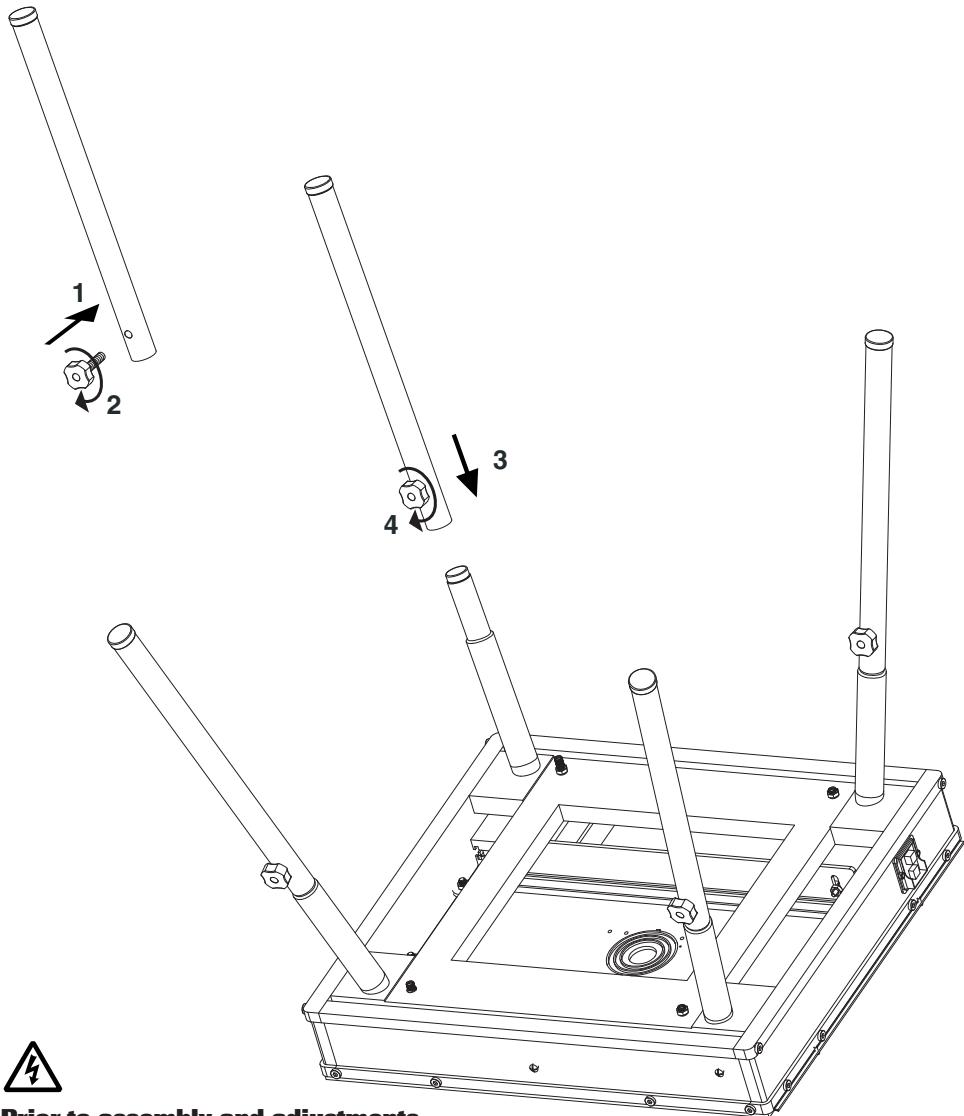

DESCRIPTION OF PARTS

- (A) Table top
- (B) Insert rings
- (C) Back fence
- (D) Scale
- (E) Dust port
- (F) Side pressure guard
- (G) Top pressure guard
- (H) Fence cheek
- (I) Guard
- (J) Pivot guard lock
- (K) Floor legs
- (L) Bench legs
- (M) Lead on pin
- (N) Router trigger lock strap
- (O) Mitre fence
- (P) Lead on pin park
- (Q) Pushstick
- (R) Mitre fence slot
- (S) Back fence slots/keyhole
- (T) Push stick park
- (U) Router clamping screws
- (V) Lead on pin location hole
- (W) No volt release switch
- (X) Back fence vertical adjuster assembly
- (Y) Back fence locking knob and bolt
- (Z) Mitre fence false cheek fixing screws
- (AA) Bench leg adjustment foot

ASSEMBLY

Fitting Legs

**Prior to assembly and adjustments
always unplug the router table.**

**The router table does not need to
be secured to the floor or bench.**

Router Compatibility

See machine screw illustrations on next page.

Three machine screws (B) are supplied as standard with the PRT table.

Make	Router Model	Screw x Qty
TREND	T3, T4, T5, T5 Mk2	B X 2
TREND	T9, T10+, T11+	B X 3

- Re-drilling of router base by user required.
- Re-drilling of insert plate by user required.
- + Packing piece 3mm thick required.
- ♦ Not 115v.

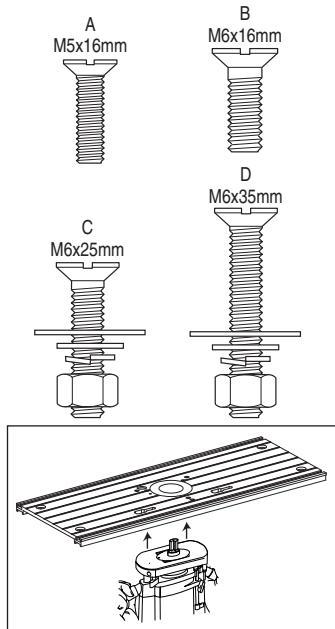

**Do not mount any power tools
not specified on this list.**

**115v routers over 13.5A cannot
be used with the PRT/L (115v).**

Mounting Router to Insert Plate

Invert and stand your router onto a suitable surface. Remove middle extrusion from table by turning cam locks by using a slotted screwdriver and place it facing upwards onto the base of your router use slotted screwdriver. Screws are supplied for TBC routers. For other makes of router re-drilling of the router base and/or insert plate, and appropriate machine screws, will be required. See chart, for details of accessory screws Ref. FIX/KIT/2.

Re-drilling Router Base Only

- Invert and stand your router onto a suitable surface.
- Remove middle extrusion from table by turning cam locks and place it facing upwards onto the base of your router.
- Adjust position of the middle extrusion to centralise.
- Ensure that the holes you are about to drill in the base do not interfere with any of the features on the router or any webbings in the casting of the router base. A slight turning of the router may be required to miss such obstructions.

- Mark the centre of the holes onto the base.
- Remove middle extrusion and mark the centre of the holes with a centre punch.
- Drill a 6mm diameter hole at these points.
- Clean up edges of holes if required.

Re-drilling Middle Extrusion Only

- Remove middle extrusion from table by turning cam locks.
- Remove the plastic base of the router. Alternatively a photocopy or an outline of the base can be made of the plastic base instead.
- Align the centre of the middle extrusion to the router base and secure them together.
- Using a centre punch, mark the centres of holes.
- Drill the required hole size with a suitable metal cutting drill bit. Best results will be obtained if your power drill is mounted in a drill stand.
- Countersink the hole with a countersink bit to a depth so the heads of the screws are slightly below the top surface. Clean off any burrs.

Re-drilling both Middle Extrusion and Router Base

- Invert the router and lay the middle extrusion onto the upturned base.
- Clamp the middle extrusion and router base together with two cramps.
- Ensuring that the drill bit will not foul any webbing or fixtures on the router base, drill with a 6mm diameter metal cutting drill bit into the middle extrusion and through the router base two holes.
- Unclamp the router base and middle extrusion.
- Countersink the middle extrusion holes with a countersink bit to a depth so the screw heads are slightly below the top surface. Clean off any burrs created on both the middle extrusion and router base.

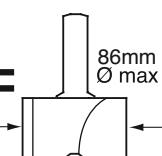

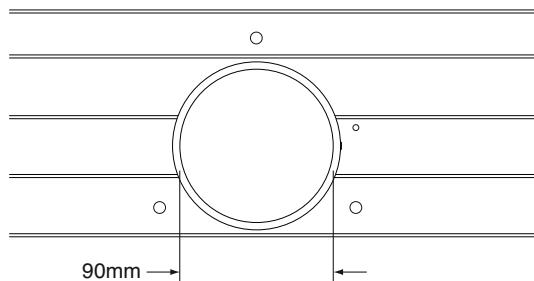

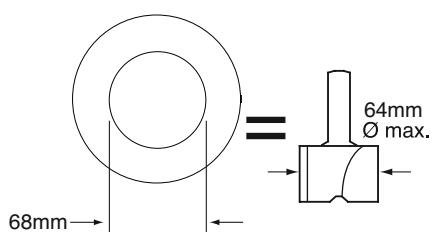

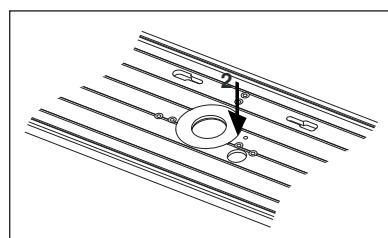

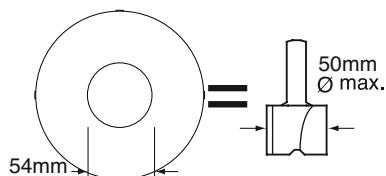

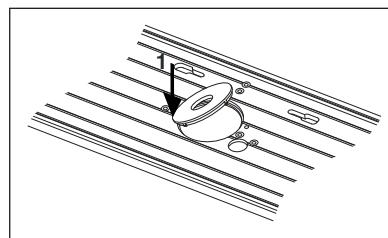

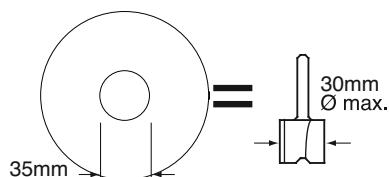

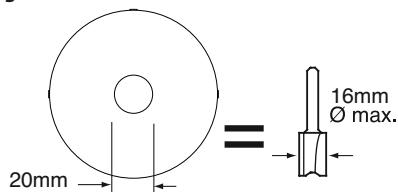

**Ensure working position is comfortable.
If placing on a workbench ensure
workbench is stable and secure.**

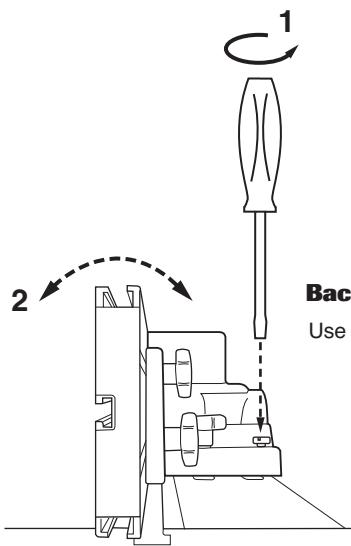

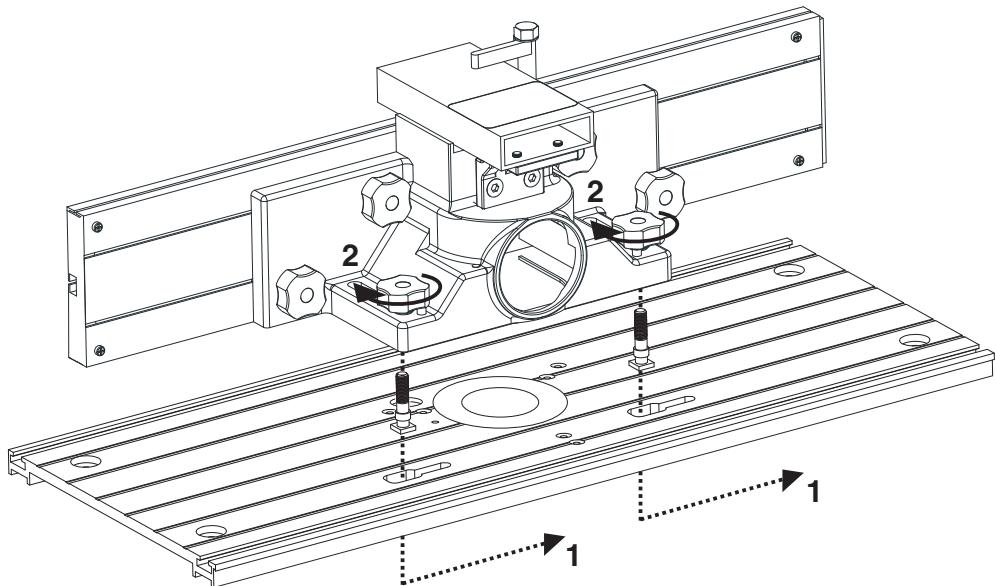

Fitting Insert Rings

Always ensure insert rings are a tight fit in the insert plate.
Replace damaged or loose rings immediately.

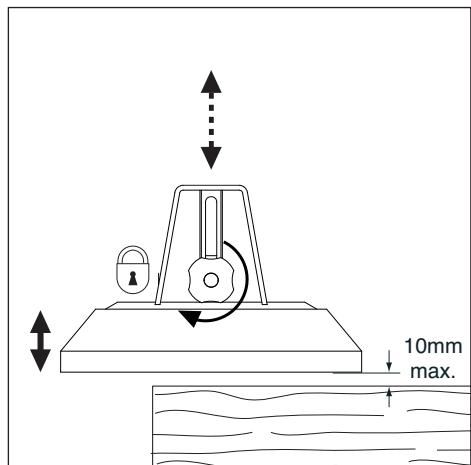

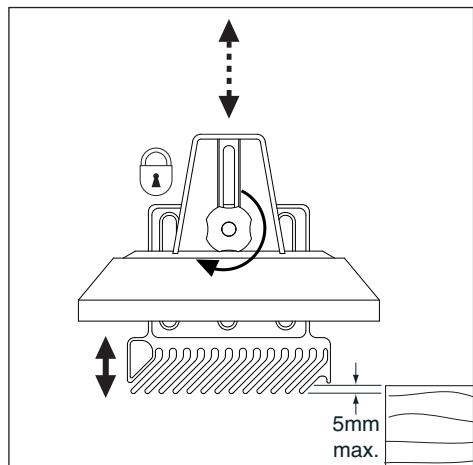

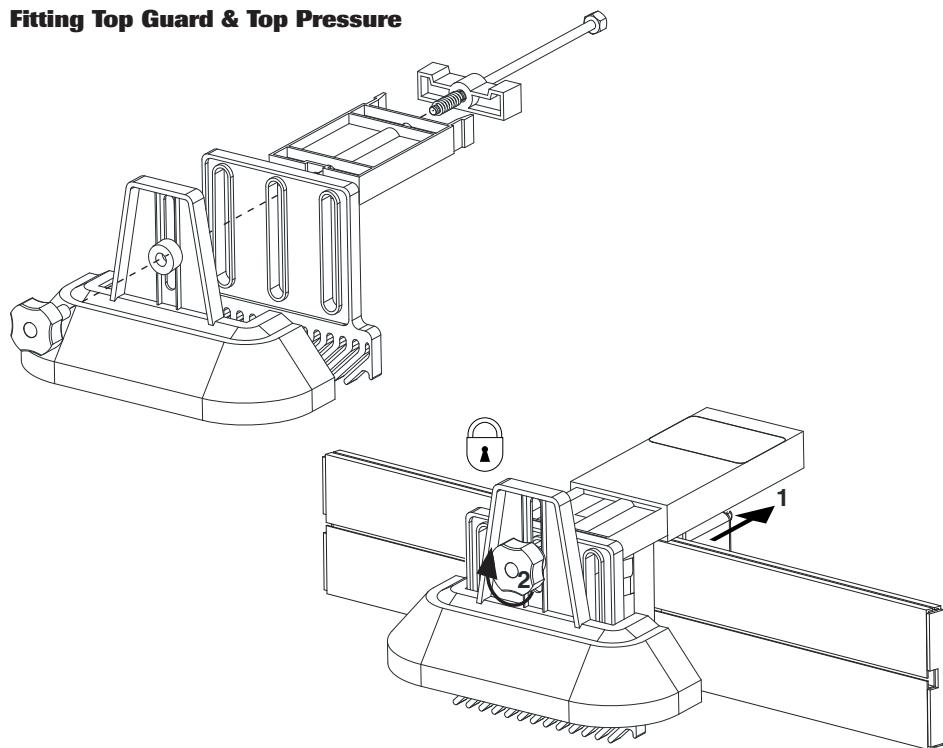

Fitting Back Fence

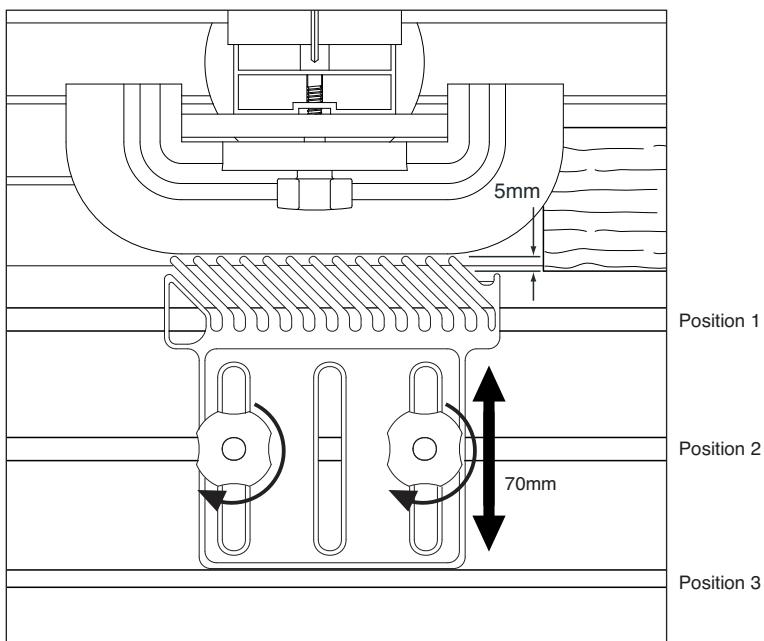

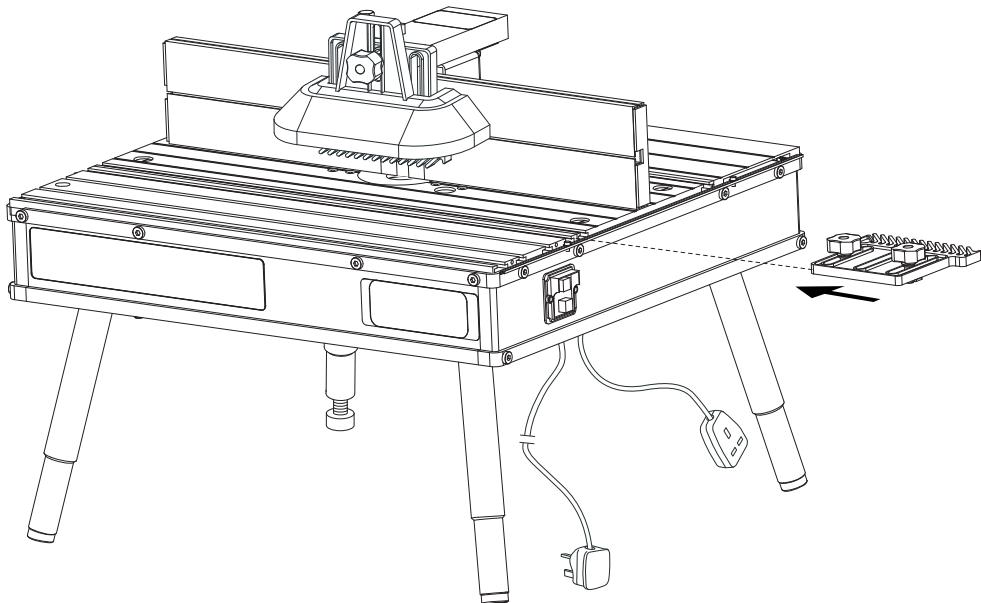

Back Fence Vertical Adjustment

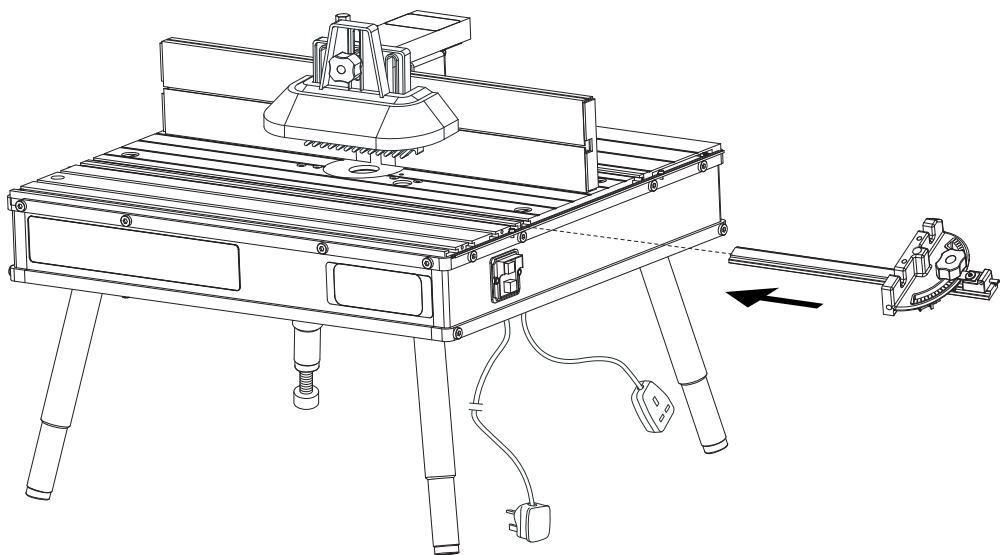

Use a slotted screwdriver.

Fitting Top Guard & Top Pressure

Fitting Side Pressure

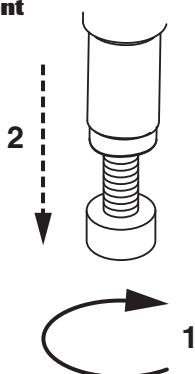

Fitting Mitre Fence**Mitre Fence Adjustment**

Preset mitre fence angles can be zeroed by loosening the lock nuts on the underside of the protractor using an 8mm A/F spanner, and adjusting the screws using a Pozi® No.2. screwdriver. Once set tighten the nuts with an 8mm A/F spanner.

Bench Leg Foot Adjustment

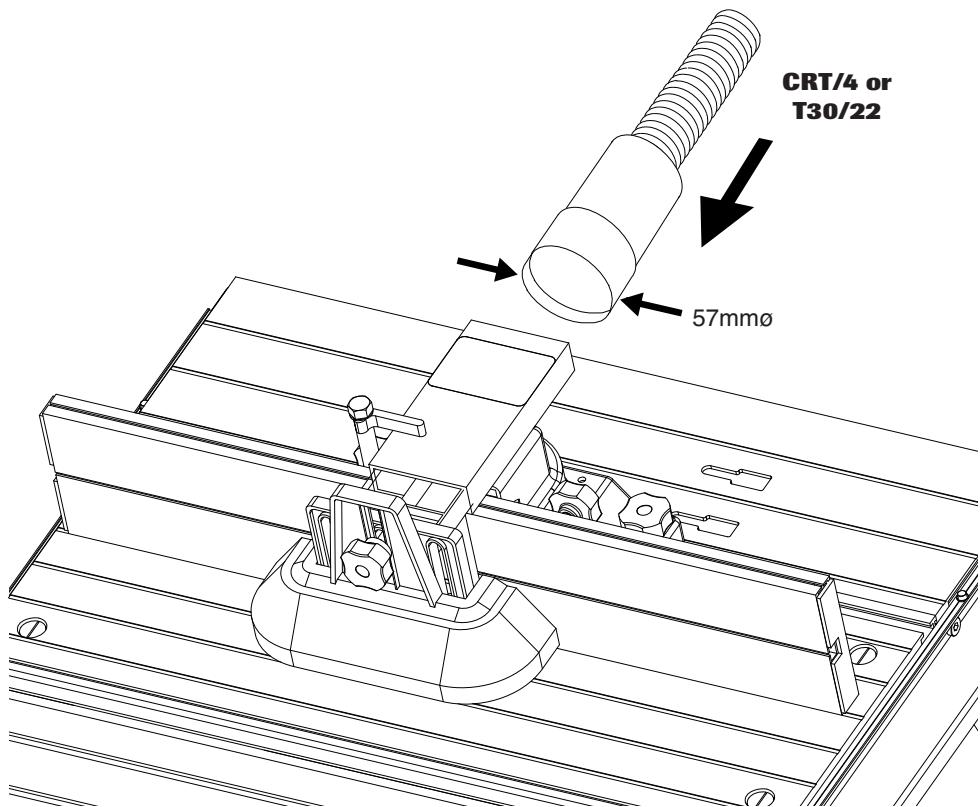

The back left bench leg has a height adjustment facility.

Fitting Dust Extraction Hose

Accessory Ref. CRT/4 or T30/22

(not included)

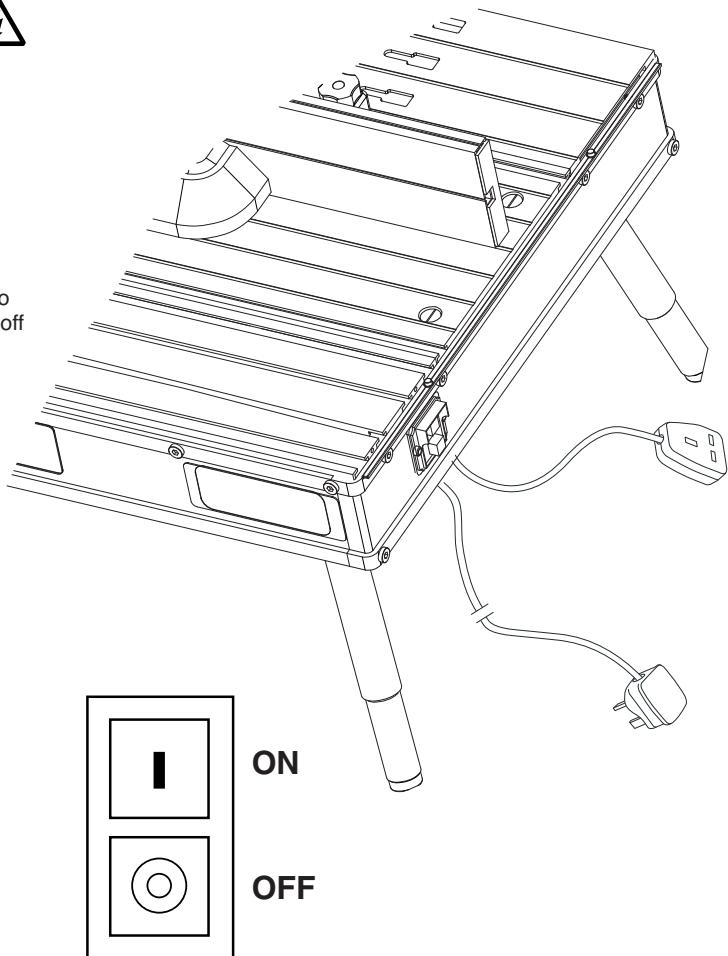

OPERATION

No-Volt Release Switch

- Plug machine into trailing socket.
- Put plug of switch into mains supply.
- Switch on router
- Press green button to switch on. To switch off press red button.

**Isolate from
power supply
when making
any adjustments.**

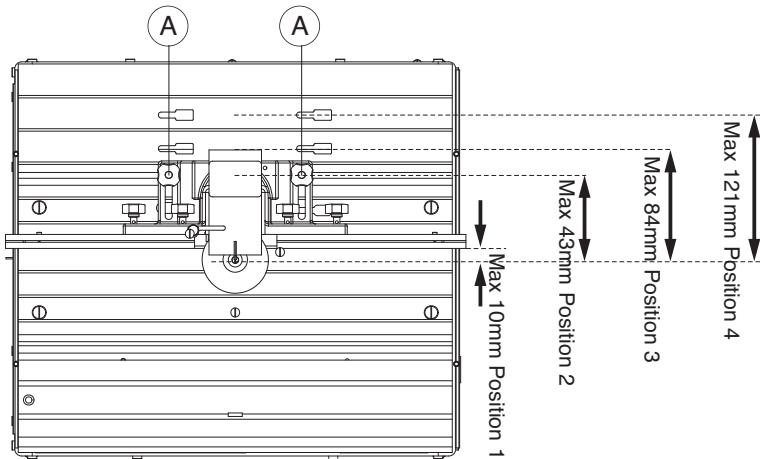

ON

OFF

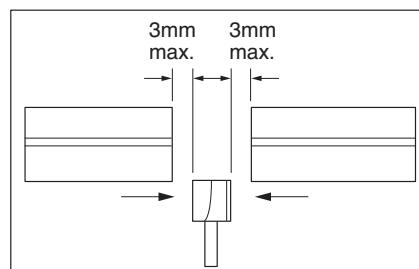

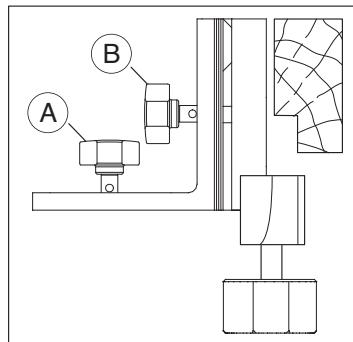

Back Fence Adjustment

- Adjust back fence position by loosening two knobs (A) and pushing fence forwards or backwards.
- Lock fence position by tightening the two knobs (A).

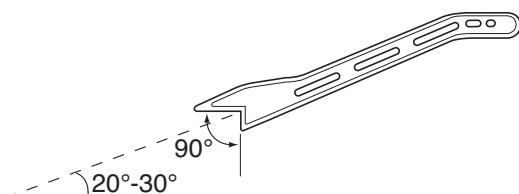

- To adjust fence cheeks loosen four back knobs (B). Slide cheeks in and out to suit cutter. Leave gap of 3mm.
- Lock cheeks by tightening four knobs (B).

Pushstick Operation

The pushstick has been designed for use with a router table, and should always be used when making any cut less than 300mm in length or, when feeding the last 300mm of a longer cut. The birds mouth is 90° and should be angled at between 20° to 30° to the workpiece to suit the height of the machinist.

Do not use the pushstick as a lever or for uses other than those envisaged.

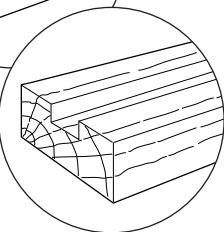

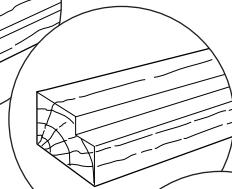

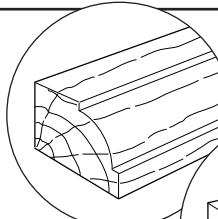

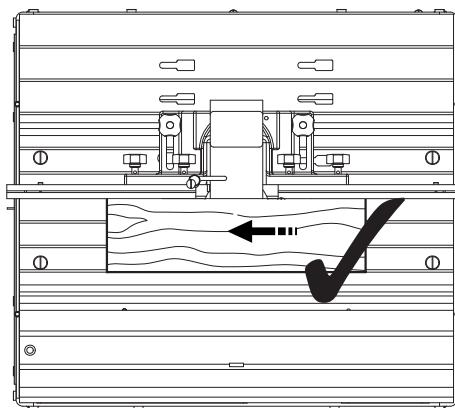

Compliance with the safety requirements of the regulations in force is nullified by any modification or tampering with the pushstick.

**Edge Moulding
and Grooving**

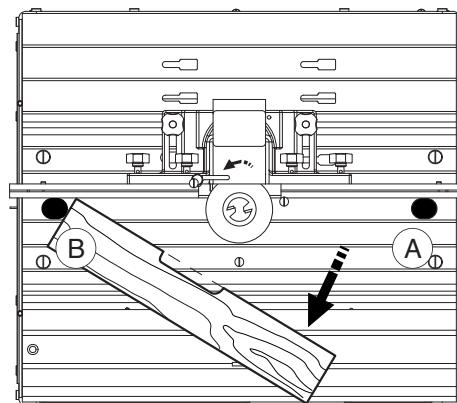

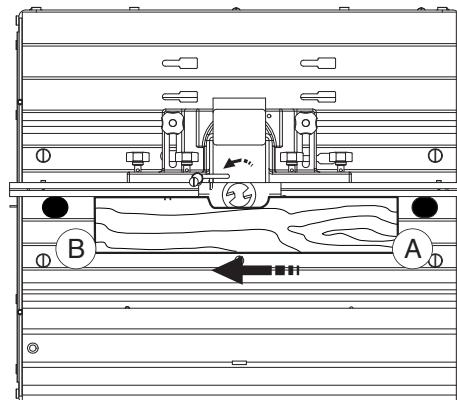

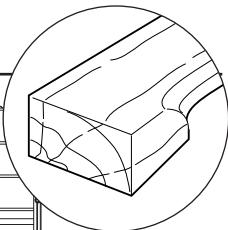

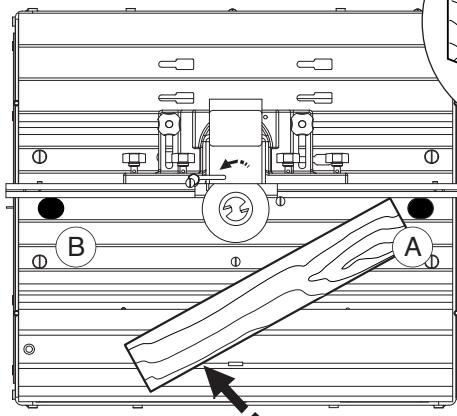

- Isolate from power source.
- Fit cutter.
- Set back fence position.
- Set top and side pressures.
- Fit guard.
- Check all knobs are tight.
- Plug into power supply.
- Switch on.
- Feed right to left.
- Switch off.

Stopped Moulding

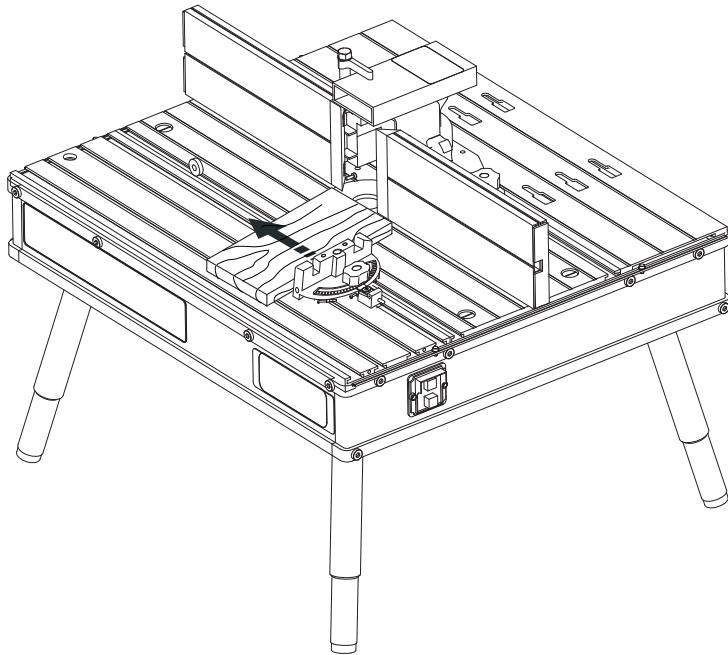

- Isolate from power supply.
- Fit cutter.
- Set back fence position. Fit some stops to back fence using cramps.
- Fit guard.
- Check all knobs are tight
- Plug into power supply.
- Switch on.
- Drop material against infeed stop A and pivot into cutter.
- Feed right to left, until reaching outfeed limit stop B.
- Pivot at outfeed stop.
- Switch off.

Mitre Fence

- Isolate from power supply.
- Fit cutter.
- Adjust angle of mitre fence by loosening knob and turning protractor head to line up angle required with arrow.
- Place component onto mitre fence.
- Plug into power supply.
- Feed right to left holding component securely.
- Switch off.

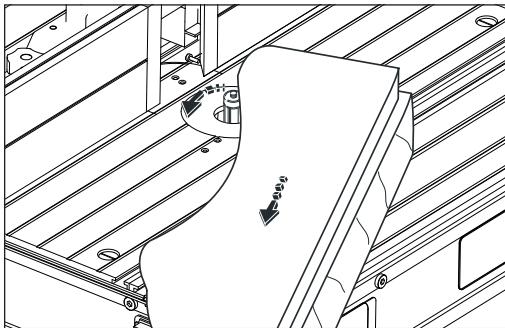

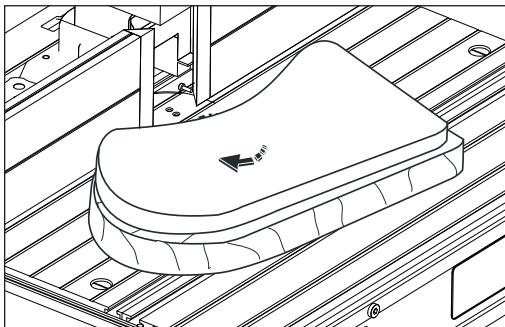

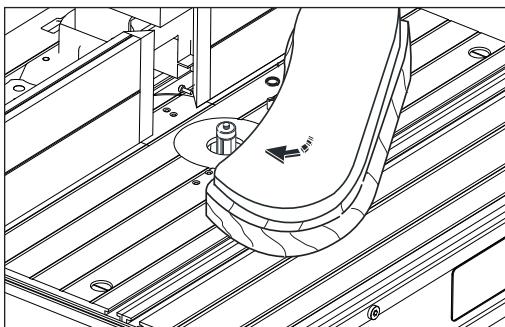

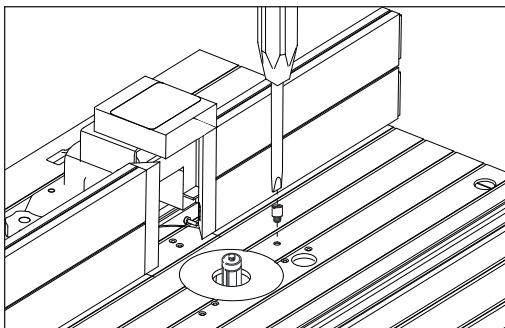

The mitre fence has fixing holes to allow a spelch block to be secured using screws (supplied).

Lead-on Pin

- Isolate from power supply.
- Fit lead-on pin into threaded hole using a slotted screwdriver.
- Move back fence back.
- Fit self guided cutter.
- Fit top guard.
- Plug into power supply.
- Support component onto the lead-on pin and swing into cutter and contact bearing guide.
- Mould component.
- Switch off.

**Guard removed
for clarity.
Ensure guard is
fitted when using
self guided cutters.**

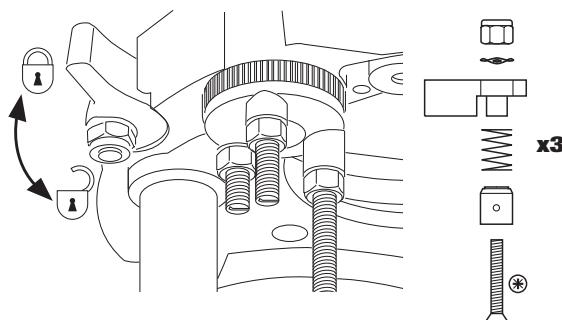

ACCESSORIES

Please use only Trend original accessories.

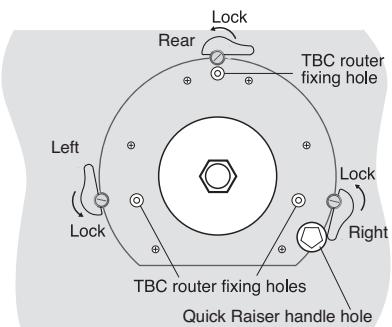

T11 Quick Release Kit

Ref. T11/JT/KIT

A kit that allows the T11 router to be quickly fitted and removed from the PRT.

PRT Table Top View

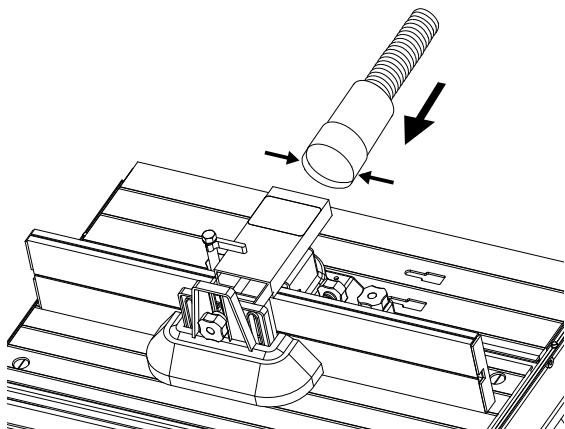

Hose and Connector

Ref. CRT/4 or T30/22

The back fence is provided with an extraction point for connection to suitable vacuum extractors. The internal hole diameter is 57mm (2-1/4"). Suitable fittings with 57mm outside diameter are available for most extractor units.

- Only a vacuum extractor unit recommended for use in the workshop should be used.

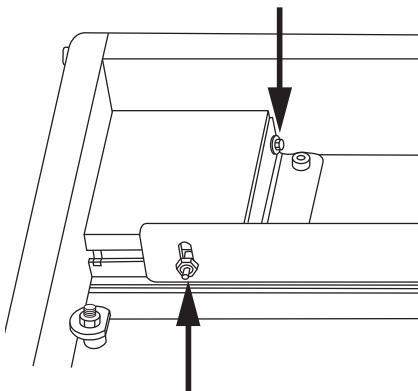

Ref. CRT/4 Hose 39mm OD x 32mm ID x 3m.

Ref. T30/22 Hose 57mm OD x 1.5m. Large capacity hose for use with Ref. T30A vacuum extractor for increased air flow.

MAINTENANCE

The router table has been designed to operate over a long period of time with a minimum of maintenance. Continual satisfactory operation depends upon proper tool care and regular cleaning.

- Replace the cutter insert when worn out.
- The table top front and back extrusions can be levelled by adjusting the bolts on the underside of the table using a 13mm A/F spanner.

Cleaning

- Keep the grooves clear of sawdust.
Regularly clean the table with a soft cloth.

Lubrication

- Your router table requires no additional lubrication.

Storage

- When not in use the table should be stored safely. It is advisable to cover the table.
- The pushstick is provided with holes to store easily on the table.

ENVIRONMENTAL PROTECTION

Recycle raw materials instead of disposing as waste.

Accessories and packaging should be sorted for environmental-friendly recycling.

Separate collection. This product must not be disposed of with normal household waste.

Household User

Local regulations may provide for separate collection of electrical products from the household, at municipal waste sites or by retailer when you purchase a new product.

Please call Trend Customer Services for advice as to how to dispose of unwanted Trend electrical products in an environmentally safe way or visit www.trend-uk.com

Business User

Please call Trend Customer Services for disposal of unwanted Trend electrical products.

GUARANTEE

The unit carries a manufacturers guarantee in accordance with the conditions on the enclosed guarantee card.

For the location of your nearest Trend Service Agent, please call Trend Customer Services or see Stockist Locator at www.trend-uk.com

Please use only Trend original spare parts.

PRT - SPARE PARTS LIST

V2.0 12/2005

No.	Qty.	Desc.	Ref.
1	1	Extrusion Top Middle	WP-PRT/01
2	0	Back Fence Complete	WP-PRT/02
